Allowable Subject Matter

1. Claims 46, 49, 51-62 are allowed. The following is an Examiner's statement of reasons for allowance:

The closest prior art is Harriman (U.S. Patent No.: 5,898,687) and Olarig (EPO 897,154). Harriman (U.S. Patent No.; 5,898,687) teaches: a switch which the method of receiving cells or packets at an ingress or input port and writing the payload or data packet to shared memory or buffer memory of the switch. Pointers are written into the address point or first memory and next the pointers are transferred to a queue in the multicast engine or second memory. The pointers are inherently dequeued when the cell or packet is multicast in order for the invention to work. Olarig (EPO 897,154) teaches integrating memories of different speeds with a processor so that they can be used during a single cycle. There was no reasonable motivation to combine these two references.

Claims 46, 49, 51-62 are considered allowable since when reading the claims in light of the specification, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in the independent claims including "establishing a linked list by transferring in a single transfer cycle, the plurality of pointers to a second memory of the egress port, the second memory having a second memory access time that is significantly slower than the first memory access time; and dequeuing each pointer from the second memory and forwarding the corresponding data packet form the egress port.", as specified in claim 46.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
